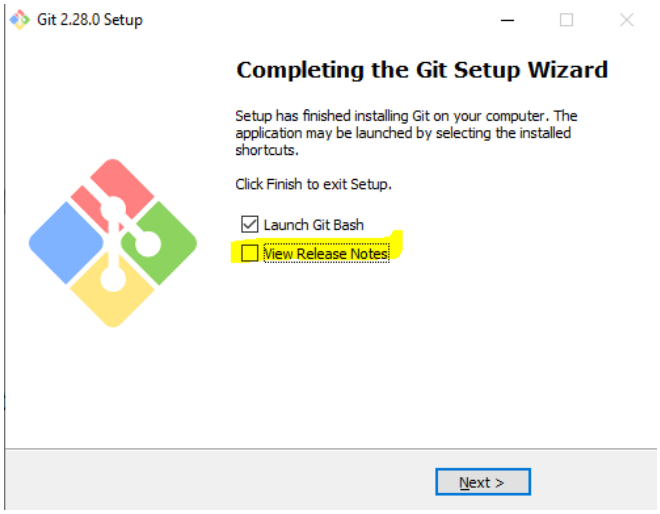
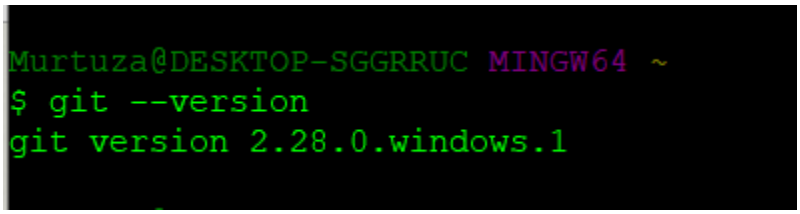
18. Uncheck the “View Release Note” and Click **Next:**



19. GitBash terminal will automatically open .Run the below command

a. **git --version**



b. If it returns the version then Git is successfully installed.
   Note: We can try the same command in Command prompt (CMD) also.

MAC:

1. Open the Terminal
2. Type : **git --version**
3. An Xcode installation GUI will Pop up.
4. Click on Agree and install the Xcode.
5. After Installation again Run the command **git --version**
6. Git Version will be returned.
7. If it returns the version then Git is successfully installed.

Note: We can also install the X-code manually using the command :

sudo xcode-select --install
